THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE** OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

Allowable Subject Matter

Claims 3-12, 19, and 22 are allowed.

The following is an examiner's statement of reasons for allowance: As in claim 3, none of the prior art alone or in combination discloses a switched mode power converter with a first impedance, a second impedance, and a first sense circuit for obtaining momentary information on a first current flowing through the first impedance, means for determining a difference between a zero load voltage and the output voltage to obtain a difference signal, a second sense circuit for obtaining further information on a second current flowing through the second impedance, an integrator for integrating a difference between the further information and the difference signal to obtain a correction signal, and a switch controller for receiving the difference signal, the momentary information and the correction signal to control the switch for obtaining a substantially zero correction signal in a steady state, the switch controller including: a driver for receiving a first driver signal and a second driver signal to operate the switch when a level of the first driver signal reaches a level of the second driver signal, and means for receiving the correction signal for correcting either: (i) the momentary information to obtain corrected momentary information, wherein the first driver signal is the corrected momentary information and the second driver signal is the difference signal, or (ii) the difference signal to obtain a corrected difference signal, wherein the first driver signal is the momentary information and the second driver signal is the corrected difference signal, or (iii) the momentary information to obtain corrected momentary information and the difference signal to obtain a corrected difference signal, wherein the first driver

signal is the corrected momentary information and the second driver signal is the corrected difference signal.

As in claim 19, none of the prior art alone or in combination discloses a switched mode power converter with a first impedance, a second impedance, and a first sense circuit for obtaining momentary information on a first current flowing through the first impedance, means for determining a difference between a zero load voltage and the output voltage to obtain a difference signal, the means for determining the difference comprises a third resistor arranged between a reference voltage and the output voltage to obtain a difference voltage across the third resistor the difference signal being related to the difference voltage, a second sense circuit for obtaining further information on a second current flowing through the second impedance, the second sense circuit is arranged for supplying an information current being related to the voltage across or the current through the second impedance, an integrator for integrating a difference between the further information and the difference signal to obtain a correction signal, the integrator comprises a capacitor for integrating the difference current and the information current to obtain the correction signal and a switch controller for receiving the difference signal, the momentary information and the correction signal to control the switch for obtaining a substantially zero correction signal in a steady state.

As in claim 22, none of the prior art alone or in combination discloses a switched mode power converter with a first impedance, a second impedance, and a first sense circuit for obtaining momentary information on a first current flowing through the first impedance, means for determining a difference between a zero load voltage and the

output voltage to obtain a difference signal, a second sense circuit for obtaining further information on a second current flowing through the second impedance, an integrator for integrating a difference between the further information and the difference signal to obtain a correction signal, and a switch controller for receiving the difference signal, the momentary information and the correction signal to control the switch for obtaining a substantially zero correction signal in a steady state, and wherein the means for determining the difference comprises a third resistor arranged between a reference voltage and the output voltage to obtain a difference voltage across the third resistor the difference signal being related to the difference voltage, wherein the power converter is a down-converter comprising a series arrangement of main current paths of the first mentioned switch the inductor being arranged between a junction of the main current paths and an output of the converter, a smoothing capacitor is coupled to a terminal of the main current path of the first mentioned switch directed towards the input of the power converter, and the second impedance is arranged between the input of the power converter and the main current path of the first mentioned switch; wherein the means for determining the difference is arranged to supply a difference current being related to the voltage across, or a current through the third resistor, the second sense circuit is arranged for supplying an information current being related to the voltage across or the current through the second impedance, and the integrator comprises a capacitor for integrating the difference current and the information current to obtain the correction signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to NGUYEN TRAN whose telephone number is (571)270-1269. The examiner can normally be reached on M-F 7:30-5:00, OFF every other Friday.
